SENNELO MULANGA GUNDO

Junior Software Engineer | Backend & Full-Stack Development
Johannesburg, South Africa | 069 794 9195 | mgsennelo@gmail.com
github.com/AlgoSumarai | linkedin.com/in/mulangasennelo | Portfolio

PROFESSIONAL SUMMARY

Backend-focused Junior Software Engineer with strong frontend capability and a solid foundation in object-oriented design, data structures, and relational databases. Experienced in designing and building RESTful APIs, backend services, and full-stack applications with C#/.NET, PHP/Laravel, SQL, and JavaScript/TypeScript, with production exposure across the full software development lifecycle (design, implementation, testing, debugging, deployment). Ownership-driven and fast to learn new technologies, with a track record of independently delivering systems end to end.

TECHNICAL SKILLS

Languages: C#, Java, Python, JavaScript, TypeScript, PHP, SQL

Backend: ASP.NET Core Web API, ASP.NET MVC, Entity Framework Core, LINQ, Laravel, Node.js (Express), RESTful API design, authentication and authorization

Frontend: Next.js**,** React, Vue.js, HTML5, CSS3, responsive web design

Databases: SQL Server, MySQL, PostgreSQL, relational data modelling, query optimisation

Tools & DevOps: Git, GitHub, GitHub Actions (CI/CD), Docker, Postman, Linux fundamentals

Practices: Object-oriented programming (OOP), clean architecture, unit testing, debugging, Agile/Scrum collaboration

PROFESSIONAL EXPERIENCE

Junior Software Engineer - TheRad Sep 2025 - Apr 2026
Remote

- **Backend Engineering:** Developed and maintained backend modules for a modular ERP system serving a manufacturing client, using Laravel (PHP) and Filament — implementing business logic, structured workflows, and admin functionality.
- **Data Modelling:** Designed and worked with relational data models and queries underpinning ERP business workflows, ensuring data integrity across backend modules.
- **Production Support:** Diagnosed and resolved production defects on a client-facing Joomla/PHP website, improving stability and reducing recurring functional issues in a live environment.
- **End-to-End Delivery:** Independently designed, built, and shipped an interactive learning platform of 26 maths games (JavaScript, HTML, CSS), owning the architecture, application logic, and deployment end to end.
- **SDLC:** Contributed across the full software development lifecycle — implementation, testing, debugging, and deployment — in a collaborative remote engineering team.

PROJECTS

AlgoDojo – Interactive Data Structures & Algorithms Learning Platform

Live: algo-dojo-bice.vercel.app

Source Code: github.com/AlgoSumarai/algo-dojo

- Designed and developed an interactive learning platform using **Next.js, TypeScript, React, Tailwind CSS, Zustand, and Framer Motion**, implementing reusable visualizations for sorting, searching, trees, graphs, stacks, queues, heaps, and hash maps through a scalable component-based architecture.

ChessLens - Chess Analysis and Practice Platform

Source Code: github.com/AlgoSumarai/chess-lens

- Built a full-stack chess analysis platform with C#/.NET, PostgreSQL, React/TypeScript, Docker, and a separate Stockfish worker, supporting PGN imports, legal game replay, live analysis updates, and evaluation visualisations.
- Implemented recurring-weakness insights and personalised puzzle practice with evidence-backed positions, Stockfish-validated alternatives, attempt tracking, hints, and spaced review scheduling.

KitchenBuddy API - ASP.NET Core Web API

Source Code: github.com/AlgoSumarai/KitchenBuddyAPI

- Designed and implemented RESTful api backend services using ASP.NET Core, C#, Entity Framework, LINQ, and SQL, applying clean architecture principles with a focus on data integrity, maintainability, and scalability.

OJGroceries - ASP.NET MVC E-Commerce Platform

Video demo (YouTube)

- Built a full-stack e-commerce application (ASP.NET MVC, C#, SQL Server, HTML, CSS) implementing authentication, business logic, and database-driven product, order, and user workflows.
- Designed relational database schemas and optimised queries to support transactional workflows.

SnakeAI - Reinforcement Learning Project

Source Code: github.com/AlgoSumarai/snake-ai-pytorch

- Developed training loops and decision logic in Python and PyTorch, applying reinforcement learning and optimisation strategies to algorithmic problem solving.

EDUCATION

Bachelor of Science in Information Technology Feb 2021 – Jul 2025
University of Johannesburg — Auckland Park, Johannesburg
